

Jenkins pipeline jobs

1. Create or Destroy Infrastructure job

Create a pipeline job in Jenkins calling the script as below

<https://github.com/jyothi-kasturi/vf-assignment/blob/master/jenkins/Jenkinsfile.createOrDestroyInfra>

Pipeline

Definition: Pipeline script from SCM

SCM: Git

Repositories:

- Repository URL:
- Credentials: Add
- Advanced...
- Add Repository

Branches to build:

- Branch Specifier (blank for 'any'): Add Branch

Repository browser: (Auto)

Additional Behaviours: Add

Script Path:

Lightweight checkout: ☒

2. Build the spring boot application for dev environment

Select dev as your environment - entire automation works currently for dev only

From Jenkins create a pipeline job with the below configurations

Pipeline

Definition Pipeline script from SCM

SCM Git

Repositories

Repository URL https://github.com/jyothi-kasturi/vf-as

Credentials Add

Advanced...

Add Repository

Branches to build

Branch Specifier (blank for 'any') */master

Add Branch

Repository browser (Auto)

Additional Behaviours Add

Script Path ./jenkins/Jenkinsfile.buildSpringBoot

Lightweight checkout ☒

3 Deploy it to AWS Elasticbeanstalk

In Jenkins, install the AWS Elasticbeanstalk plugin.

Create Jenkins freestyle job as per below configurations

Build

 AWS Elastic Beanstalk

AWS Credentials and Region

Credentials

AWS Region

Number Of Attempts

Validate Credentials

Application and Environment

Application Name

Environment Name(s)

Validate Coordinates

Packaging

Root Object (File / Directory) 

Includes 

Excludes 

Uploading

S3 Bucket Name 

S3 Key Prefix 

Version and Deployment

Version Label Format 

Description Format 

Zero downtime? ☐ 

Amount of time to sleep between deployment status checks (seconds) 

Ensure Health is Green after deploy? ☒ 

This will deploy the spring boot application to AWS Elasticbeanstalk

4. Destroy the infrastructure - Select Destroy option from above job1 created in jenkins
